1 Prepare CT

HU [−1000, 500]
1 mm isotropic
256 × 256 ENet input

2 Locate

Frozen 3-slice ENet
Three slices
Same-seed checkpoint

3 Correct

Native CT organ crops
Trachea → esophagus → heart
Protect other organ labels

4 Measure

Native-volume predictions
Raw and fixed cleanup
Dice, HD95 and abs RVD

Separate organ models and seed runs · aorta keeps the ENet prediction before cleanup

25 complete training epochs · 35 training / 5 validation patients · 3 seeds
